related to berberine bridge enzyme [imported] - Neurospora crassa
Nalternate names: protein B24B19.280
C)Species Neurospora crassa
C)Species Neurospora crassa
C)Bate: 02-Uun-2000 #sequence_revision 02-Jun-2000 #text_change 02-Jun-2000
C)Accession: T49756
R)Schulte, U.; Aign, V.; Hoheisel, J.; Brandt, P.; Fartmann, B.; Holland, R.; Nyakatura, submitted to the Protein Sequence Database, May 2000
A)Reference number: 22502

-!- FUNCTION: Catalyzes the oxidation of cytokinins, a family of N(6)-substituted adenine derivatives that are plant hormones, where the substitutent is an isopeneenyl group.
-!- CATALYTIC ACTIVITY: N(6) (3-methylbut-2-enyl)adenine + H(2)O +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Molecular and biochemical characterization of a cytokinin oxidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                STRAIN=cv.                                                                                                                                                                                                                                             -i- FUNCTION: Catalyzes the oxidation of cytokinins, a family of N(6)-substituted adenine derivatives that are plant hormones, where the substituent is an isopentenyl group. Cleaves zeatin, isopentenyladenine, isopentenyladenine, zeatin riboside and ciszeatin, but not dihydrozeatin, kinetin and benzylaminopurine.
-!- CATALYTIC ACTIVITY: N(6)-(3-methylbut-2-enyl)adenine + H(2)O + O(2) = adenine + 3-methylbut-2-enal + H(2)O(2).
                                                                                                                                                                                                                                                                                                                                                                                     --- ENZYME REGULATION: Competitive inhibition by phenylureas.
--- SUBUNIT: Monomer (By similarity)
--- SUBCELLULAR LOCATION: Extracellular and unpollinated
--- TISSUB SPECIFICITY: Expressed in immeture kernels and unpollinated cobs. Weakly expressed in kernels harvested two weeks after
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PIM: Glycosylated, with approximately 10 hexose residues per site. SIMILARITY: Belongs to the oxygen-dependent FAD-linked oxidoreductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    44.4%; Score 1152; DB 1; Length 534;

ulonolactone + H(2)O(2)
-!- COPACTOR: FAD.
-!- PATHWAY: Ascorbate biosynthesis; last step.
-!- SUMCELIULAR LOCATION: Membrane-associated. Microsomal membrane.
-!- SIMILARITY: Belongs to the oxygen-dependent FAD-linked
oxidoreductase family.
-!- SIMILARITY: SOME, TO YEAST D-LACTATE DEHYDROGENASE [CYTOCHROME].
                                                                                                                                                                                                                                                                                     SEQUENCE FROM N.A., AND PARTIAL SEQUENCE.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
